DynamX HDX Data Analysis Software 3.0 Maintenance Plan

A Software Maintenance Plan is required for ALL software ordered. This plan entitles the user to priority telephone technical support, from the applicable Waters office, during the office's normal work hours. It also entitles the user to software maintenance upgrades for this software option released during the maintenance period. The initial purchase of maintenance covers the first year of ownership. Software maintenance plans must be renewed by the customer on an annual basis. These include service packs, feature releases, and new versions of DynamX software.

Note: HDX requires ProteinLynx Global Server v 3.0 or higher. PLGS v 3.0 is not included in 176016018 and must be ordered separately. PLGS is required, but there is no requirement for a PLGS server. The acquisition workstation can be used to process HDX data when not acquiring data.

PLGS

Overview

PLGS 2.4 is one of the three enabling technologies that together comprise the Identity High Definition Proteomics" system

Leverages the quality of the data acquired by scientists using UPLC MSE exact mass acquisition for quantitative and qualitative label-free proteomics, returning more proteins hits.

Presents results in a format more easily explained and understood than current probability-based scoring schemes.

Processing

Incorporates algorithms to perform relative quantitation of isotopically labelled samples.

When used with electrospray MS/MS data, the software allows automatic interpretation of data by means of a hierarchical strategy incorporating any of the following routines: databank searching, post translational modification assignment and amino acid substitution (AutoMod), automated #batch# de novo sequencing (MassSeq), sequence homology searching (BLAST).

Reporting

The software incorporates a fully customizable report generation and printing capability.

Management

Sample and project management, acquisition and processing automation software for MALDI and electrospray (MS/MS) instruments for protein identification and peptide characterization.

Project management tools allow samples to be catalogued and tracked through to data interpretation where they are annotated with the predicted protein identity.

Mascot

Queries may be sent directly to, and results received from, a Mascot server. All results will be displayed alongside results received from the PLGS search engine.

Databases

Databanks of proteins in FASTA or Swiss-Prot format may be automatically downloaded, updated and indexed using the Database Administrator tool.

A license fee is payable for the Swiss-Prot database(www.expasy.ch). This license is not sold by Waters.

Exporting

All data are marked up in XML format.

Peak lists may be output to 3rd party search engines.
