The SFO provides the automation with a selector valve to direct the flow through the analytical or preparative switching valves. Three analytical and two preparative columns can be plumbed for method developement. Additionally the SFO controls upto three 515 pumps for M/S make up flow, At-Column Dilution, and or solvent modifiers. An seven port ethernet hub is integrated in the SFO. Optional system leak detection capability is contolled by the SFO. The start-up kit provides the tubings and fittings needed to plumb the system.

The following items are included as part of the core standard system:

AutoPurify, a feature of the FractionLynx Application Manager, enables users to allow the software to:

Automatically screen samples to determine the preparative strategy in an analytical-scale separation

Choose an appropriate method for each sample in a batch and purify it

Screen fractions to determine the next process step

The FractionLynx Application Manager provides a variety of collection options including:

One-to-one mapping to retain plate format
