Hi Joel, I would say I am comfortable with that, but it is really a question for the quality organization.

Best regards,

Eric Turner

Subject: [EXT] PDA Shunt Energy Reading on DHR

ATTENTION: This email originated from outside of the organization. Please do not open any attachments or click any links unless you recognize the sender and know the content is safe.

Hi Eric,

With reference from day one practice of PDA family test to read shunt/cell energy and print and attached to DHR.
Pls. refer to attached example M20UPL306A FOR ATTACHED TO DHR with Energy Reading (pages 3, 4 and 5).

Since its is not documented test on TSP 735001613, we would like to propose to remove this 3 pages (as its already redundant from final test result as below).

Lambda1	178	185.742	188	nM	PASS
Lambda512	801.5	804.1214	811.5	nM	PASS
Shunt/Cell energy 5ms	80000	121860	250000	counts	PASS

Pls. advise if you are comfortable with the removal of this 3 pages and I will settle rest here in Flex document checklist.

Best Regards,

flex.
